RCR™ **Transtibial Socket Workshop**

In an effort to increase our educational capabilities, Coyote is hosting its first in-house RCR Transtibial Socket Workshop on August 21st. The Boise, Idaho facility is designed to optimize the learning process by incorporating many of the unique fabrication techniques that are associated with the RCR socket and Coyote suspension methods. As part of our 10th anniversary celebration we are offering a free raft trip the day before the workshop, August 20th. We have a discounted hotel rate near Coyote's facility with transportation to and from the airport, rafting, and the workshop to help keep cost at a minimum. Come to Boise to enjoy the rafting and stay for a informative workshop to help with your fittings and your bottom-line as well as obtaining 8.75 CEU's. Space is limited, so go to www.opga.com to register early.

**RCR WORKSHOP & RAFT TRIP
AUGUST 21, 2009**

COYOTE DESIGN CELEBRATES 10 YEARS

As you may have seen in our literature, Coyote Design turned ten years old this June. Over the ten years we have continued to develop innovative products, and are on pace for our best year yet. We also have a product development pipeline that is full of some of the most exciting products yet. We have, over the last couple of years, been expanding in size, product line and now more than ever, educational capabilities. We recently hosted our first webinar on the RCR socket design and are hosting our first workshop at our new educational facility in August. Keep an eye out for more education opportunities, product specials and new products.

WELCOMING ASPEN RYLEIGH JOHNSON

Miranda Johnson, Coyote customer service manager welcomed a new child, Aspen Ryleigh on February 28th, 2009. Miranda and

husband Chris we very pleased with the safe delivery of Aspen at 7lbs. 10oz.

NEW CASTING TAPE

Our first entry into fiberglass casting tape turned out to be mediocre at best and we quickly pulled it from the market. Our second round is turning out to be what you expect from Coyote products, highly functional and cost effective. We are currently stocking two, three and four inch rolls of fiberglass tape. Ideal for prosthetic and orthotic casting, as shown in the RCR workshop, this tape is also very competitive in pricing. Contact us today for an introductory special.

NEW SILICONE BOWL

As we have taught the RCR workshops we have discovered a number of areas of the fabrication process that needed better, more efficient tools. Long ignored, the casting and modifying process is an area where great time savings is possible. We first introduced the Modification Handle to reduce blade breakage and make modification easier. Now to help avoid messes, and make cleanup easier we have introduced our Silicone bowl. The 12oz mixing bowl is easy to clean, durable and the wide base makes it easy to handle and prevents tip over's. It is ideal for jobs large and small.
